

# Chemical Dosing

CEES MEICA Solutions design and manufacture complete dosing systems primarily for the Water Utility sector. We provide them as part of larger MEICA contracts or as a specialist supplier.

We have developed bespoke PLC control software as well as HMI visualisation for easy operation. Event, alarm and dosing histories can be downloaded as XLS (Excel) files if required or real time monitoring can be provided for data logging, remote control and adjustment.

We fabricate the dosing skid incorporating either displacement or variable speed pumps as required by the client. Motive Water and Water Softening plant can also be provided.

As a MEICA solutions provider we also provide chemical storage facilities with fill point control and emergency shower facilities.
