

Mechanical Engineering & Installation Services

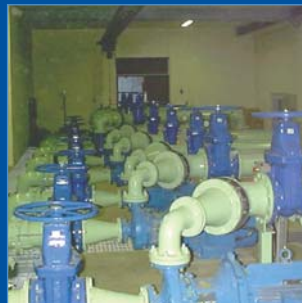

CEES Ltd are highly experienced in the management, design and implementation of mechanical projects.

Our experience encompasses sizing, selection and process integration of pumps, pipe work and valves in all applications of fluid dynamics.

Competently engineered packages incorporating full design calculations are presented via state of the art CAD facilities.

Our modern equipped 'in-house' manufacturing facilities enable us to meet your specifications precisely. Our experience allows us to work with a range of materials to include uPVC, stainless steel as well as carbon steel. Alternatively our extensive mobile fabrication operations can bring our expertise to your location.

All our teams have been trained to allow working with chlorine, in hazardous areas and confined spaces. Our teams only work to approved method statements and risk assessments to ensure Health & Safety compliance throughout.

- Full support services available from design concept through to manufacture.
