

Water Utility Services

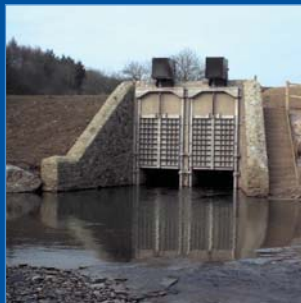

CEES Ltd has built an unsurpassed reputation for supporting the Water Utilities Industry.

Combining all our regular engineering disciplines such as Controls and Systems, Software, Electrical and Mechanical engineering services we have gained exceptional experience within the water industry.

We have an in-depth knowledge of the industry including WIMES and have structured ourselves to meet the expectations required. We are confident that our management approach will continue to be successful in achieving our goal of providing our clients with the level and range of services that meet their demands in this crucial market sector.

To further compliment our traditional engineering activities we have produced many innovative solutions for the supply and treatment operations. In particular we have developed a range of Bridge Scrappers that have some unique design features.

- Of course all our operatives are confined space, ATEX, chlorine handling and CDM trained. Our specialist teams only work to approved method statements and risk assessments to ensure health and safety compliance throughout the project.
